May 4, 2023

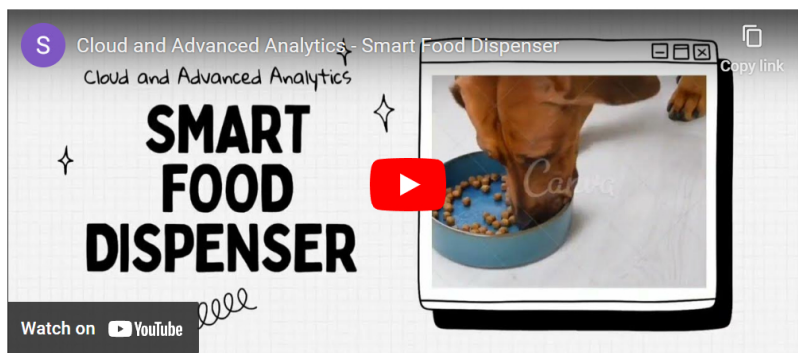

🐶📱 Ever wondered how technology can make pet care easier? Meet the Smart Food Dispenser, an innovative solution that ensures your furry friend never misses a meal!

This ingenious system uses a combination of sensors, cloud computing, and machine learning to dispense food when your pet is detected. It even sends notifications to your phone when the food tank is empty, so you can refill it in a timely manner.

Plus, we've developed a web application that acts as your control center. With this web app, you can visualize feeding data, adjust dispenser parameters, and even get predictions for the next feeding time and refill date.

Check out this video to see the Smart Food Dispenser in action:
